PROFESSIONAL SUMMARY

Builds production data pipelines and dimensional models on Google Cloud with Python, BigQuery, Dataform and Cloud Run. Sole owner of the Client Data Mart in the company's first data warehouse, built in 2026 from ingestion through layered modelling to the dashboards it serves. In data since December 2022 across five business domains, promoted from finance operations after five years.

PROFESSIONAL EXPERIENCE

Booth (formerly Booth & Partners), Makati, Philippines September 2017 – Present

Data Analyst December 2022 – Present

- Delivered the Client Data Mart as sole owner in the company's first Google Cloud data warehouse: Python ingestion into BigQuery, Dataform models layered from raw through staging to dimensional marts, and Cloud Run scheduling, with Zoho Analytics dashboards on top.
- Worked on the warehouse's design from its start in early 2026 across the data model, architecture, security and governance, then built ingestion, transformation and scheduling for Talent Acquisition, its first domain.
- Built and maintained dashboards within a team portfolio of 10 to 20 across sales, operations, people, talent acquisition and client reporting since December 2022, with ad hoc analysis for executives: the business context that let the team build the warehouse in house.

Team Leader December 2020 – November 2022

- Led a finance team covering accounts payable, accounts receivable, and credits and adjustments for US, Canadian and Australian accounts, tracked against KPIs from operational reports.
- Produced daily, monthly and quarterly performance reporting for internal stakeholders and clients.

Senior Accounts Payable / Accounts Receivable Specialist April 2019 – November 2020

- Owned credits, adjustments and vendor disputes, keeping the accounts database accurate, and produced monthly and quarterly financial reporting.

Accounts Payable / Accounts Receivable Specialist September 2017 – March 2019

TaskUs Inc., Bonifacio Global City, Philippines May 2015 – April 2017

Email Support Representative

PROJECTS

Formula 1 Analytics Pipeline 2026

github.com/lemybetheone/f1-analytics-pipeline

- Built an end-to-end analytics pipeline independently: every Formula 1 season since 1950, extracted from a rate-limited public API, landed once in AWS S3 and loaded into PostgreSQL with idempotent upserts, then modelled as a tested Kimball star schema in dbt. Any reload replays from S3 at zero API cost.
- Wrote a dbt test reconciling derived championship points against official standings, which exposed that sprint points were missing entirely: 437 official against 399 derived for the 2024 season.
- Orchestrated the nightly refresh with Apache Airflow in Docker using per-task retries, dead-letter capture and failure reporting, so the pipeline runs unattended, with linting and tests enforced on every push by GitHub Actions.

TECHNICAL SKILLS

Languages: Python, SQL
Cloud and Warehousing: Google Cloud Platform (BigQuery, Cloud Run), AWS S3, PostgreSQL
Transformation, Orchestration and BI: Dataform, dbt, Apache Airflow, Zoho Analytics, Looker Studio, Metabase
Engineering Practice: Dimensional modelling (Kimball), medallion architecture, data quality testing, Git, GitHub Actions, CI/CD, pull-request workflow, Docker

EDUCATION

Pamantasan ng Lungsod ng Maynila, Manila, Philippines 2015

Bachelor of Science in Business Administration, Finance and Treasury Management
